

road to nowhere

Still relying on POTS and VoIP? Might we suggest a little change in direction?

POTS lines are going away. VoIP is unreliable. If you're not using radio as a primary path of alarm transmission, what are you waiting for? Honeywell's GSM radios are the best defense against today's communications challenges. In fact, Honeywell is the industry's only provider to offer an end-to-end solution that delivers secure, reliable signal transport, full uploading and downloading and an opportunity to increase your RMR by offering Total Connect Remote Services and two-way voice over GSM. And it's all built and backed by the power and dependability of Honeywell. We'll put you on the road to success!
